

PROPRIETARY SOFTWARE LICENSE

Signature-Gated Authorization Agreement

Licencia propietaria de uso restringido para Q+7LkMK05. Este documento establece las condiciones base; no concede acceso por sí solo.

DOCUMENT ID	Q7-LIC-20260531-8A19140D5C
VERSION	1.0
ISSUED	2026-05-31 16:49:11 UTC-04:00
OWNER / REQUIRED SIGNATORY	Emil Enmanuel Pieter Mora
REPOSITORY SNAPSHOT	924c0a5
LICENSE TERMS SHA-256	8A19140D5C4E6C1B5B03B95DD96A592CEC5CED89ECBC4538DE02E90B9DD26C12

IMPORTANT: An unsigned authorization is invalid. Possession of this PDF, the repository, or a deployed copy does not grant permission to use the software.

Nature of this document

Q+7LkMK05, its code, interfaces, catalogs, reports, cryptographic workflows, graphics, scripts, documentation, and downloadable artifacts are proprietary. This agreement reserves all rights that have not been expressly granted in writing.

This document is designed as a practical proprietary license template. It should be reviewed by a qualified attorney before commercial deployment or use across jurisdictions.

The authorization rule

A person or organization may use the software only after receiving an individual License Grant Certificate that identifies the licensee, the permitted environment, the scope, the validity period, and a unique license identifier. The certificate must carry the signature of **Emil Enmanuel Pieter Mora**.

- Repository access is not a license.
- A deployed instance is not a license.
- A copied PDF without the required signature is not a license.
- An altered certificate, expired certificate, or mismatched integrity record is invalid.

1. Rights reserved

Unless an individual signed License Grant Certificate expressly states otherwise, the owner retains the exclusive right to authorize execution, copying, modification, distribution, commercialization, sublicensing, service exposure, and derivative works.

2. Standard restrictions

- Do not redistribute, resell, sublicense, lease, publish, or transfer the software.
- Do not disclose source code, credentials, activation material, or private keys to third parties.
- Do not remove attribution, proprietary notices, integrity records, or audit controls.
- Do not bypass access controls, activation checks, audit mechanisms, or security restrictions.
- Do not claim official legal, regulatory, or government certification unless separately obtained.
- Do not use the software to violate applicable law or third-party rights.

3. Confidentiality and security duties

Credentials, private keys, activation records, signed certificates, and customer data must be protected as confidential information. Compromised credentials must be revoked and rotated promptly. Authorization does not expand because a credential was copied or exposed.

4. Revocation and termination

Authorization terminates automatically at expiration or when signed conditions are violated. Access may be revoked as permitted by the applicable agreement and applicable law. After termination, the former licensee must cease use and delete unauthorized copies unless retention is legally required.

5. Warranty and professional review

To the maximum extent permitted by applicable law, the software is provided without warranties unless a separate signed agreement states otherwise. Independent security and legal review is required before use in critical, regulated, or high-risk environments.

6. Mandatory law

Nothing in this license limits rights that cannot legally be excluded. Any exception required by applicable law remains applicable only to the extent required by that law.

Activation Annex

Complete one annex for each authorized person or organization. The annex becomes valid only after the required signature is added and its integrity record is issued.

LICENSE CERTIFICATE ID	_____
AUTHORIZED LICENSEE	_____
IDENTIFICATION / REGISTRATION	_____
AUTHORIZED ENVIRONMENT	_____
AUTHORIZED PURPOSE	_____
VALID FROM	_____
VALID UNTIL	_____
DEVICE / DEPLOYMENT BINDING	_____
SPECIAL CONDITIONS	_____
DETACHED DIGITAL SIGNATURE	_____
CERTIFICATE SHA-256	_____

Required authorization signature

By signing this annex, the owner grants only the limited authorization described above. No unsigned, copied, or modified annex is valid.

Required signatory	Emil Enmanuel Pieter Mora
Signature	_____
Date and time	_____
Signing method	Manuscript / qualified e-signature / detached digital signature

Recommended implementation: issue each activation annex with a unique identifier and a detached Ed25519 signature from a protected private key. The private signing key must not be embedded in the browser bundle or committed to the repository.

Integrity and verification record

The PDF is accompanied by a detached SHA-256 file. SHA-256 proves whether the PDF changed after generation; it does not replace the owner's signature or create authorization.

CONTROL	PURPOSE	STATUS
Signed individual annex	Proves an explicit grant to a named licensee	REQUIRED
Unique certificate ID	Prevents ambiguous or reusable authorizations	REQUIRED
Certificate SHA-256	Detects modification of the signed artifact	REQUIRED
Detached digital signature	Recommended cryptographic validation of issuer	RECOMMENDED
Private key isolation	Keeps issuer signing material outside frontend code	RECOMMENDED
Revocation registry	Allows an issued certificate to be disabled	RECOMMENDED
Audit record	Tracks issuance, verification, expiration, and revocation	RECOMMENDED

Implementation note

A strong commercial workflow should combine the signed legal annex with server-side certificate verification, revocation, HTTPS, access controls, and audit records. No document alone can make software impossible to copy or bypass.

Legal notice

This draft is not legal advice and is not an official registration, government certificate, notarial act, or digital-signature certificate. It is a proprietary software license template prepared for Q+7LkMK05. Obtain legal review before relying on it commercially.
