

Pricing algorithm for HSG2818 tools

Formula: `suggested_tool_price = monthly + setup/6 + related_code_value x 28 + small_rarity_modifier`.

Tool prices are software/service prices. Code prices are per cryptographic unit or per 10-code pack.

The difference column explains whether a tool creates, verifies, transports, stores, analyzes or monetizes codes.

Tools priced: 55. Cryptographic codes referenced: 10,000. Currency: USD.

Recommended commercial packaging

Starter service: utility/export/database tools for small code workflows.

Professional service: certificates, evidence, security suite and analysis labs.

Enterprise service: Zero Trust, Law engine, Phone OS, API, HNS/HOS/HCP and container flows.

Important: prices are suggested HSG2818 service prices, not financial advice or legal valuation.

Difference with the 10,000 cryptographic codes

A cryptographic code is the generated material: key, token, digest, signature packet, KDF output or HSG2818 profile.

A tool is the operational layer: it creates, signs, verifies, stores, transports, visualizes, audits or sells those codes.
